

No organization is immune from disasters. Part of building a sustainable organization is to have a solid plan for disasters of all magnitudes. CSF bv's Disaster Recovery and Business Continuity planning services can evaluate your current disaster recovery and business continuity situation and develop a comprehensive, risk-based approach to DRBC.

A typical DRBC project includes:

- Project initiation and resource planning
- Risk assessment and qualification
- Business impact analysis
- Disaster response and operations
- Business contingency strategies and plan development
- Awareness training
- Tabletop, functional and live drills
- Public relations and crisis management
- Coordination with first responders, public entities and third-party partners

CSF bv relies on internationally accepted frameworks and methods for DRBC consulting including:

- NIST 800-34 – Contingency Planning Guide for Information Systems
- NFPA 1600: Standard on Disaster Emergency Management and Business Continuity Programs
